### Training activity in MATIS Research Institute - Reykjavik

In the framework of the training activities taking place during the DiTECT project postdoctoral researcher Dr. Anastasia Lytou visited MATIS research institute as well as University of Iceland in Reykjavik. During this visit, she had the opportunity to work on with multispectral imaging sensors as well as other instruments - such as texture analyser - in an attempt to approach fish quality assessment from different angles.

Above all, she had the opportunity to collaborate with experts in seafood science and technology and gain significant knowledge on this field, expanding at the same time the cooperation network.
